

Advisory Council on Historic Preservation 2018 Sustainability Report and Implementation Plan

Executive Summary

As a contributing agency (an agency that does not receive a scorecard), the Advisory Council on Historic Preservation (ACHP) is not required to submit a Sustainability Report and Implementation Plan, and may elect to submit only an executive summary. Accordingly, the ACHP submits the following Executive Summary.

The ACHP is fully committed to compliance with federal environmental and energy statutes, regulations, and Executive Orders in its daily operations. An independent agency established by the National Historic Preservation Act of 1966 (NHPA, 54 U.S.C. § 3001 *et seq.*), the mission of the ACHP is to promote the preservation, enhancement, and sustainable use of our nation's historic resources, and to advise the President and Congress on national historic preservation policy. Consistent with its mission, the ACHP will encourage the preservation of historic properties as a sustainability strategy and will assist federal agencies in complying with federal historic preservation laws, regulations, and policies as they work toward achieving their sustainability goals.

In company with the National Building Museum and the U.S. Commission of Fine Arts, the ACHP is a tenant in the Pension Building, a federally owned, GSA-managed National Historic Landmark building located at 401 F Street, N.W., Washington, D.C. The ACHP's office space at the National Building Museum continues to meet a number of the principles for sustainable locations for federal facilities set forth in guidance by the Council on Environmental Quality. These include (1) central business district location; (2) location promotes transportation choice; (3) location promotes walkability and bikeability; (4) location is accessible to a diverse range of employees and visitors; (5) location leverages investment in existing infrastructure; and (6) location promotes the preservation of historic resources and other existing buildings.

The ACHP has only 40 full-time equivalent employees, and has no fleet of vehicles at its disposal. The ACHP has very limited opportunities to directly address sustainability targets and goals in carrying out its daily operations. However, within the agency's authorities and means, ACHP management and staff will continue to seek ways to achieve sustainability targets in such areas as green purchasing, travel management, video- and teleconferencing, distance learning, use of public transit, flexible work schedules, and telework, as well as through cooperation with GSA sustainable building management efforts.

Consistent with its mission, the ACHP will assist federal agencies in complying with federal historic preservation laws, regulations, and policies as they work toward achieving their sustainability goals. The ACHP also will promote the value of historic preservation as an integral part of sustainability planning and evaluation for federal land and property managers, non-federal government entities, and the private sector.

Executive Order 13287 requires that agencies with real property management responsibilities report every three years on progress in the identification, protection, and use of historic properties in federal ownership and make this report available to the ACHP and the Secretary of the Interior. The ACHP then incorporates the received data into a report on the state of the federal government's historic properties and their contribution to local economic development that is submitted to the President. In 2017, the ACHP's advisory reporting guidelines to agencies recommended that agencies provide information on how they are meeting sustainability/resiliency requirements in the context of reusing historic properties. The results were summarized in the ACHP's 2018 report to the President. Each reporting cycle, the ACHP will

continue to revise or supplement its advisory reporting guidelines to ask agencies for information on how they are pursuing sustainability and climate resilience goals in their management of historic properties.

The ACHP devotes a portion of its website to sustainability and climate resilience. Materials include general information on sustainability and historic preservation, and more specialized information on such topics as energy conservation and weatherization, community livability and smart growth, and climate adaptation and resilience. The ACHP will continue to maintain this public information resource.
